

Better answers from your existing documentation

A measured comparison of AI search models, run against your live help center

Your help center at **help.specsources.com** answers reader questions with an AI model. Today that model is **GPT-4o-mini**. We have since added newer models to Sonat, and we tested them directly against *your* content to see what difference they make.

The short version: on the same questions, with the same documentation retrieved, the newer model answered **every** question — and did it faster. The older model declined to answer a third of them.

Changes needed to your documentation

How this was measured

Method matters more than the headline, so here it is in full.

- Six real support questions were asked against your live account on **30 July 2026**.
- Each question was run twice — once on GPT-4o-mini, once on GPT-5.6 Luna.
- **Both runs retrieved the identical 10 documents** from your help center. Only the model changed.
- Answers below are reproduced **verbatim**, with nothing edited, shortened or cherry-picked for tone.

Because retrieval was identical, the difference in these answers is not about what your documentation contains. The content was already there, and already found. The older model simply did not use it.

Side-by-side: your own content

1 "How do I add a new manufacturer source?"

GPT-4O-MINI — TODAY **NO ANSWER**

I don't have enough information in the documentation to answer that completely.

GPT-5.6 LUNA **ANSWERED**

To add a new Manufacturer Source:

1. In the left navigation, click Admin.
2. Go to Address Books and select Manufacturer Source List.
3. Click Create New Manufacturer Source.
4. Choose one of these options:
 - Add a Manufacturer Manually: Enter the manufacturer's information, add contacts, assign vendors and item types, review, and click Save Manufacturer.
 - Upload a File (.xls, .xlsx, .csv): Download and complete the provided template, upload it, select the valid entries, and click Add to Manufacturers List.
 - Import from Specsources Master List of Manufacturers: Select the manufacturers to add and click Add these Manufacturers to your Manufacturer Source List.

2 "How do I create a spec sheet?"

GPT-4O-MINI — TODAY **NO ANSWER**

I don't have enough information in the documentation to answer that completely.

GPT-5.6 LUNA **ANSWERED**

Step 1: Go to the Dashboard and click on a Project.

Step 2: Click the blue "Create New Spec" button in the upper-right corner.

Step 3: Select the required Spec Type.

Step 4: Select the required Item Type.

Step 5: Enter an Item Name.

Step 6: Enter the Item Price. A default value of "0" is provided if pricing is not required.

Step 7: Click the Save icon.

Before saving, you may also add a primary image, issue date, furnished-by and installed-by information, status color, issued-by and revised-by users, and lead time.

3 “How do I add more designers or users?” — both answered, but not equally

GPT-4O-MINI — TODAY **INCOMPLETE**

The program lets Designers / Users be added as long as the quantity of licenses purchased permits it. If the purchased amount is 2, then only 2 Designers / Users can be added. For more information, please refer to the following link: <https://help.specsources.com/l...>

States the license rule, never says how to add anyone, and ends on a truncated link. The reader still has to go and find the page themselves.

GPT-5.6 LUNA **COMPLETE**

Designers or Users can be added as long as your organization has enough purchased licenses. The number of active licenses determines how many Designers/Users can be added.

To add one:

1. Go to Dashboard.
2. In the left navigation, click Admin.
3. Go to User Management > Designers / External Users.
4. Click Create New Designer.
5. Enter the required name and email; phone is optional.
6. Select the office and assign a role.
7. Click Save.

The user will receive an email to verify their address and create a password.

Full results

QUESTION	GPT-4O-MINI (TODAY)	GPT-5.6 LUNA	TIME SAVED
Add a new manufacturer source	No answer	Answered	1.4s
What an address book is used for	Answered	Answered	2.0s
Add more designers / users	Incomplete	Answered	1.7s
Create a spec sheet	No answer	Answered	1.1s
Resend a SpecWeb invitation	Answered	Answered	1.8s
Get invoices and receipts	Answered	Answered	1.9s
Answered	4 of 6 — 66%	6 of 6 — 100%	avg 1.7s

Average response time fell from 4.8s to 3.2s. Every question retrieved 10 source documents in both runs.

What the Enterprise plan gives you

The newer models are part of the Enterprise plan. Enterprise lets you choose the model behind your help center's AI search, rather than staying on the default:

MODEL	BEST FOR	SPEED
GPT-5.6 Luna — recommended	Most capable, and the quickest to answer	~3.2s
GPT-5.4 Mini	Thorough answers on complex questions	~7s
GPT-5.4 Nano	Lowest cost for high question volumes	~4s
GPT-4o-mini	Current default on your plan	~4.8s

Nothing changes on your side. Your documentation, structure, URLs and branding stay exactly as they are. Switching model is a single setting in your organization settings, and takes effect immediately.

Next step

We can enable Enterprise on your account and switch the model over, then re-run this same set of questions with you so you can see the difference on your own help center.

Prepared by Sonat · 30 July 2026
All answers reproduced verbatim from live tests against the SpecSources help center (help.specsources.com). Results reflect the six questions listed; performance on other questions may vary.
